**The Benefits**

The Advanced Oxidation gas created by the AF Quadruple Ionization Cell are safe environmentally friendly oxidizers that revert back to oxygen and hydrogen. The AF - TOSII utilizes the ION Cell to create hydroperoxides, super oxide ions, ozonide ions and hydroxides. The ozone produced is a safe low concentration, produced by a targeted high intensity UV light technology. This method is far safer than the traditional ozone generators. Targeted UV ozone generators do not produce nitric oxide gas or nitric acid and they have a very high efficiency rating. The additional oxidizers provides a broader range of applications and redundant oxidation gases.
