OVERVIEW

Air Fantastic manufactures stand-alone machines & HVAC insert probes with a technology that was originally developed by NASA and is currently used on the space shuttle and international space stations.

This technology uses a catalytic process to derive ions from the moisture in the air. These ions will neutralize odors, sanitize the air, and create a healthy living environment at the same time. Indeed, this cleaning process is similar to the one we find in nature where unpleasant odors, such as road kills, garbage and skunk spray, are eliminated through oxidation. The benefits of this technology are summarized in the following sections.

REDUCING AIRBORNE CONTAMINANTS

Test results from the West Texas A&M University prove that this process is safe and effective in reducing dangerous airborne and surface bacteria, including Staphylococcus Aurous (Staph bacteria) and the drug resistant MRSA bacteria. The tests also prove that this technology has successfully reduced airborne contaminants such as mold, fungus, and bacteria up to 99% within 72 hours. In addition, a customer performed an independent test and proved that this technology could reduced 80% of surface bacteria in just one hour.

Since the bacteria are reduced through an oxidation process and not an anti-bacterial solution, this technology reduces the possibility for germs to become immune to anti-bacterial agents through mutation.

PROVIDING ALLERGY RELIEF

Most of the allergy symptoms are results of people breathing in airborne pollen or dust. If the

exposure to airborne pollen or dust is minimized, people's allergy symptoms will gradually reduce.

Heavy and large airborne particulate contaminants such as dust, pollen, allergen, and dander can remain airborne indefinitely at certain levels due to positive static energy that repels the particulate from the ground, which is also positive. Airborne particulate contaminants can easily be observed when sunlight shines through the window in the morning. This technology produces negatively charged ions that can make these airborne particulates settle down on the floor. Lab results from the West Texas A&M University proved that up to 99% of particulates were reduced in 72 hours.

REDUCING EXPOSURE TO HARMFUL AIRBORNE GASES

This technology can quickly reduce the harmful Volatile Organic Compounds (VOCs). The VOCs are actually broken down on a molecular level. Customer lab tests showed a 60% reduction of Formaldehyde in 24 hours and an 80% reduction in ammonia in one hour.

GREEN TECHNOLOGY

No chemicals, anti-bacteria agents, synthetic deodorizers or enzymes are used in this 21st century technology. All our machines are made with this technology. Unlike other old fashioned negative ion generators, our machines will *not* produce any black stains to their surrounding area.

To help your customers find the right machine and experience the fantastic results of this technology, you are more than welcome to e-mail [Mark Mueller](mailto:markm@airfantastic.com) at markm@airfantastic.com or call him at (512) 892-5327.

HOW THE TECHNOLOGY WORKS?

The heart of the Air Fantastic machines is a cell composed of an ultraviolet lamp surrounded by sequential parallel aluminum disks impregnated with a four metal catalyst. The ultraviolet energy and the white catalyst creates an environment that allows the recombination of water (H_2O) and oxygen (O^2) molecules to produce four ions with the main ion as Hydro-peroxide (H_2O_2).

Similar to the liquid Hydrogen Peroxide found in brown bottles at the drug store, Hydro-peroxide is a dry airborne somewhat odorless ion that has the ability to travel everywhere and can sanitize air & surface bacteria, virus, mold and fungus.

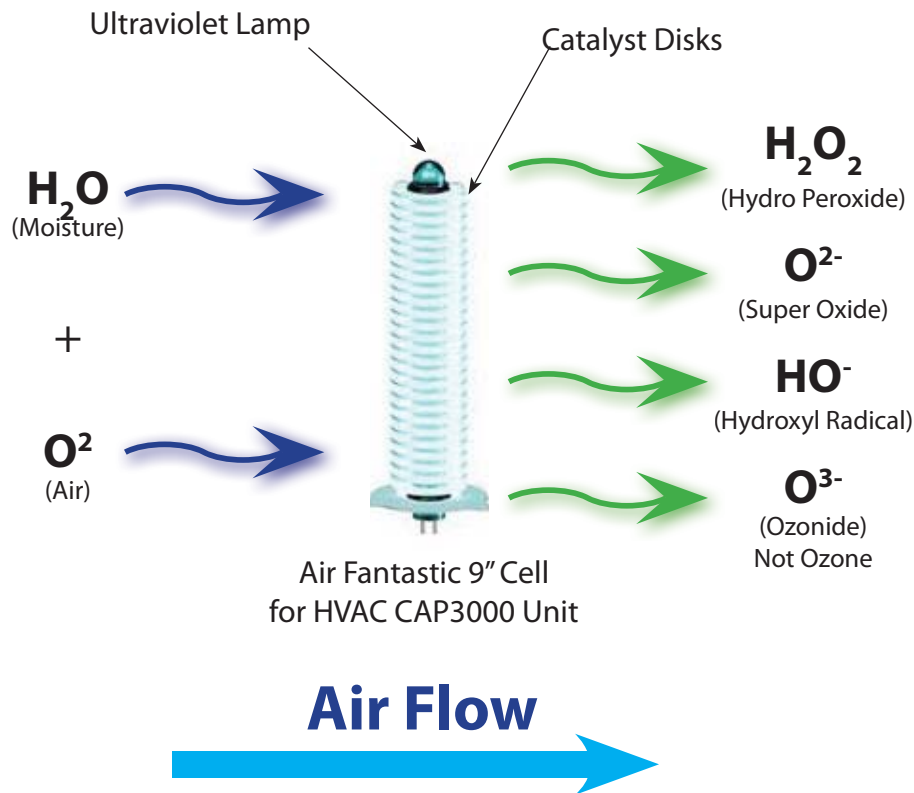

Three other oxidizing ions are also produced at the same time, including Super Oxide ion (O^{2-}), Hydroxyl Radical (HO^-), and Ozonide Ion (O^3-). Ozonide Ion is a very weak derivative of

Ozone and quickly breaks down as it enters the environment. Unlike ozone generators that create noticeable high levels of ozone, the ozone measured from our residential machines at 4 feet registers at zero or is negligible.

Outdated technology with UV only lamps installed in the HVAC systems can only kill germs within 8" of the lamp. Unlike this outdated technology, our UV lamp generates sanitizing ions that can travel throughout the entire room to kill germs and bacteria.

This technology is GREEN friendly because it uses very little energy. Most of our machines only use approximately 40 watts. The CAP3000, CAP5000 and CAP 7000 use very little energy and can be easily installed into the HVAC duct work and cover areas from 1,000 to 10,000 sq ft.

AIR FANTASTIC'S FOUR ION PROCESS

SCIENTIFIC TEST DATA: REDUCE POLLEN/DUST UP TO 99%

OVERVIEW

West Texas A&M University conducted a study to verify the reduction of airborne microbial (mold, fungal, & bacteria) and aeroallergen (pollen) with this air purification technology.

This study concluded that poor Indoor Air Quality (IAQ) not only contributes to an unhealthy environment but also hastens a building deterioration.

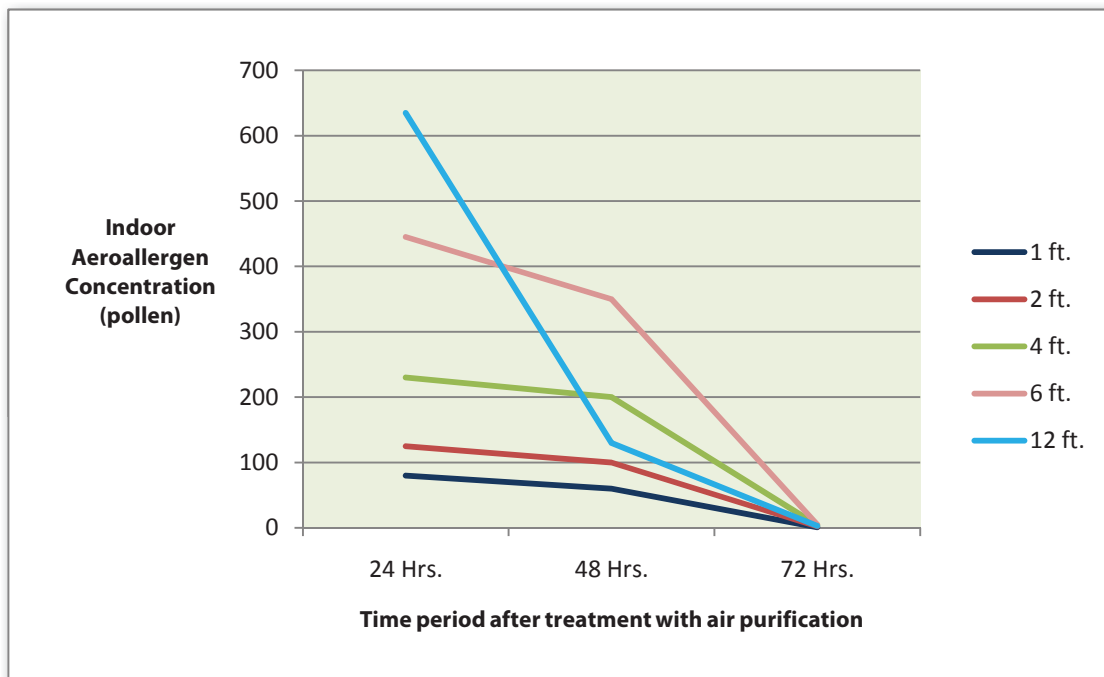

According to a study described in *School Health*¹, one school would have spent \$8,140 on preventative maintenance over 22 years by using this technology, instead of spending over \$1.5 million in repairs.

AEROALLERGEN (POLLEN)

Aeroallergen were measure at a distance of 1 feet, 2 feet, 4 feet, 6 feet, and 12 feet from the placement of air purifier.

Figure 1 shows the distribution of the aeroallergen count after the treatment of the air in the room after 24, 48, and 72 hours. There was almost no aeroallergen left close to the air purifier after 72 hours of treatment.

SCIENTIFIC TEST DATA:
REDUCE AIRBORNE BACTERIA/MOLD UP TO 99%

MICROBIAL (MOLD, FUNGAL, AND BACTERIA)

Petri dishes measured microbial colonies at distance of 1 feet, 2 feet, 4 feet, 6 feet, and 12 feet from point of air purification before turning on air purifier. The results of the test are presented in the following figures¹.

Distribution of Microbial Colonies in Control Set
(WITH Treatment of Air Purifier)

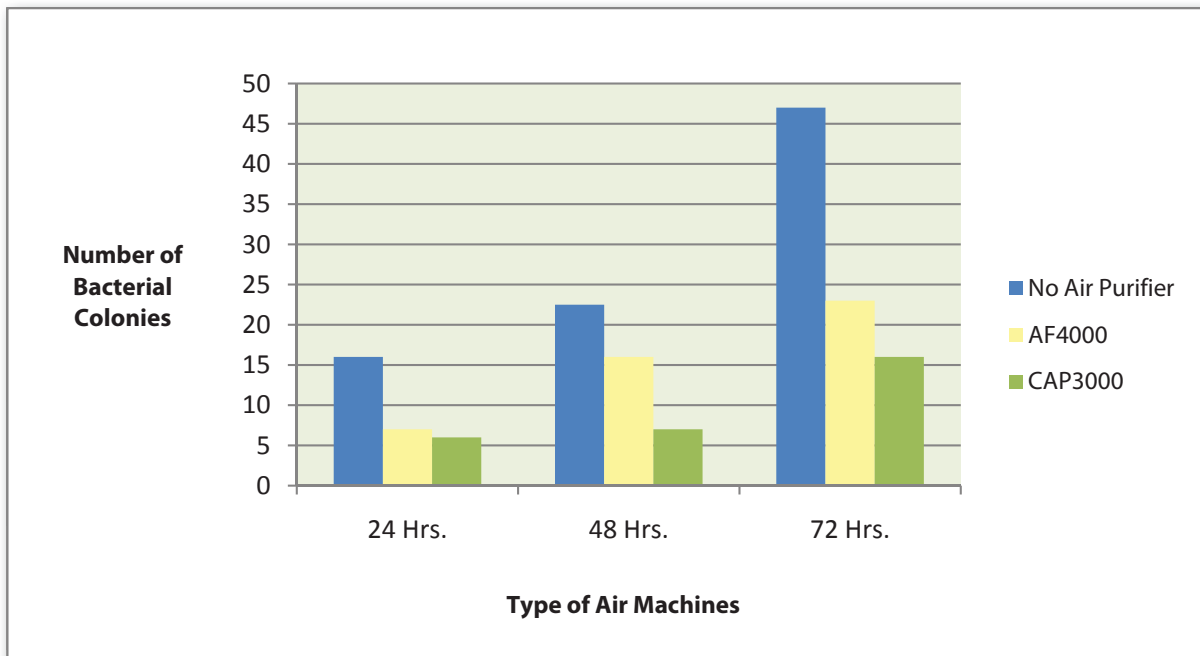

SCIENTIFIC TEST DATA: HELPS ERADICATE MRSA

MRSA is a drug-resistant Staph infection that kills more Americans each year than AIDS. A small wound looking like a spider bite can deteriorate into a serious injury and might result in death within days.

A study conducted at West Texas A&M University using our AF4000 and CAP3000 HVAC probes proved that the eradication of the surface bacteria MRSA. Figure 6 shows the reduction of MRSA bacterial colonies with our AF4000 and CAP3000 HVAC probes in a controlled environment.

MAYO CLINIC STUDY IMPLICATES FUNGUS AS CAUSE OF CHRONIC SINUSITIS

ROCHESTER, MINN. -- Mayo Clinic researchers say they have found the cause of most chronic sinus infections -- an immune system response to fungus. They say this discovery opens the door to the first effective treatment for this problem, the most common chronic disease in the United States. (See Figure 7.)

An estimated 37 million people in the United States suffer from chronic sinusitis, an inflammation of the membranes of the nose and sinus cavity. Its incidence has been increasing steadily over the last decade. Common symptoms are runny nose, nasal congestion, loss of smell and headaches. Frequently the chronic inflammation leads to polyps, small growths in the nasal passages which hinder breathing.

"Up to now, the cause of chronic sinusitis has not been known," say the Mayo researchers: Drs. David Sherris, Eugene Kern and Jens Ponikau, Mayo Clinic ear, nose and throat specialists. Their report appears in the September issue of the journal Mayo Clinic Proceedings. "Fungus allergy was thought to be involved in less than ten percent of cases," says Dr. Sherris. "Our studies indicate that, in fact, fungus is likely the cause of nearly all of these problems. And it is not an allergic reaction, but an immune reaction." The researchers studied 210 patients with chronic sinusitis. Using new methods of collecting and testing mucus from the nose, they discovered fungus in 96 percent of the patients' mucus. They identified a total of 40 different kinds of fungi in these patients, with an average of 2.7 kinds per patient.

In a subset of 101 patients who had surgery to remove nasal polyps, the researchers found eosinophils (a type of white blood cell activated by the body's immune system) in the nasal tissue and mucus of 96 percent of the patients. The results, the researchers say, clearly portray a disease process in which, in sensitive individuals, the body's

immune system sends eosinophils to attack fungi and the eosinophils irritate the membranes in the nose. As long as fungi remain, so will the irritation. "This a potential breakthrough that offers great hope for the millions of people who suffer from this problem," says Dr. Kern. "We can now begin to treat the cause of the problem instead of the symptoms."

More research is underway at Mayo Clinic to confirm that the immune response to the fungus is the cause of the sinus inflammation. The researchers are also working with pharmaceutical companies to set up trials to test medications to control the fungus. They estimate that it will be at least two years before a treatment will be widely available.

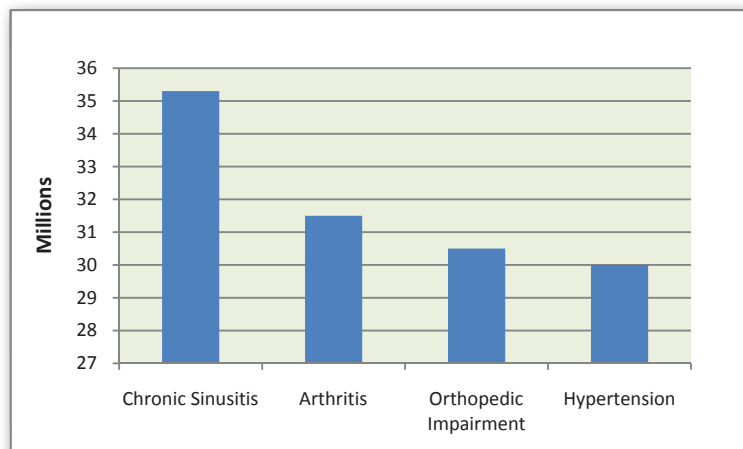

The researchers distinguish chronic sinusitis -- sinusitis that lasts three months or longer -- from acute sinusitis, which lasts a month or less. They say that the cause of the acute condition is usually a bacterial infection.

Antibiotics and over-the-counter decongestants are widely used to treat chronic sinusitis. In most cases, antibiotics are not effective for chronic sinusitis because they target bacteria, not fungi. The over-the-counter drugs may offer some relief of symptoms, but they have no effect on the inflammation.

"Medications haven't worked for chronic sinusitis because we didn't know what the cause of the problem was," says Dr. Ponikau. "Finally we are on the trail of a treatment that may actually work."

Thousands of kinds of single-cell fungi (molds and yeasts) are found everywhere in the world. Fungal spores (the reproductive part of the organism) become airborne like pollen. Some people develop allergies to fungi. The new evidence from the Mayo study suggests that many people also develop a different kind of immune system response.

Mark Mueller
President,
Air Fantastic, LLC
4406 Eagles Landing Drive
Austin, TX 78735

Dear Mr. Mueller:

I am writing to update you on our satisfaction with your Air Fantastic 4000 unit, which we purchased last month. As a forensic pathologist and Medical Examiner, we frequently encounter cases which have very strong odors due to decomposition. In the past we would be able to notice these odors in our main morgue room even with a very high air turnover. We installed the unit in the walk in cooler where the bodies are stored and since that time minimal odor is noted even within the cooler itself. Outside the cooler the air is now very pleasant. All of our employees have noted the vastly improved conditions. The unit is compact and highly efficient and takes up virtually no space installed high on a shelf. Elimination of pathogens such as bacteria will be important to us. The added benefit of reducing atmospheric gasses will also be an advantage as we utilize formaldehyde on a regular basis and want to minimize our exposure to this potentially dangerous chemical.

Thank you very much for your excellent product. I can obviously attest to it's efficacy under the most difficult of situations.

Sincerely,

Gregory A. Schmunk, MD
Medical Examiner

CUSTOMER TESTIMONIAL

Ginger N

First I would just like to say Thank you. My daughter has been sick since we moved here due to allergies. I was spending close to 300/per month in doctors bills. Since having the machine she has had a complete turn around. No more doctors. My other daughter was born with RSV & has had breathing problems for 11 years. Now with this machine, she can breathe easier & sleep through the night.

Thank you Air Fantastic.
You saved our families
health.

J. Ward

CUSTOMER TESTIMONIAL

March 04, 2004

I would like to give my sincere thanks for helping my dog Molly with her skin problems. Three months ago we were at the vet every other week trying different medications for a severe skin irritation. I had not changed any cleaning supplies in my home nor were there any changes in the household environment that I could come up with. The vet put Molly on Prednisone, a cortisone medication taken orally. After two weeks on the medication the whole right side of molly's body was still bloody and raw. The vet said it could be a fungus in the air or something else in the air in my home. Within three days of plugging in your air purification unit Molly's right side scabbed up and started healing. It has now been three months and Molly has grown here fur back and is symptom free. I have included the vet's card for you to contact him. I feel our home is now safe for both my dogs and myself. Thank you for all your help.

Sincerely,

S. Smith
Tucson, AZ

NOVEMBER 2, 2003

DEAR MARK MUELLER:

I AM WRITING TO EXPRESS MY GREAT SATISFACTION WITH THE AIR PURIFIER YOU PROVIDED MY COMPANY, YOGA VIDA. I HAVE GREAT SATISFACTION IN THE SERVICE AND IN THE PRODUCT.

MY YOGA STUDIO IS HEATED TO 100 PLUS DEGRESS AND PEOPLE SWEAT AND CLEANSE THEIR BODIES WITH THEIR YOGA PRACTICE 4 TIMES DAILY 7 DAYS A WEEK.

WITH THESE MACHINES THE STUDIO REAMAINS WITH A FRESH SMELL AND THE AIR IS LIGHT AND I BELIEVE MUCH HEALTHIER.

I JUST NEEDED TO SAY THANK YOU.

MAY OTHERS EXPERIENCE THIS SERVICE AND PRODUCT WITH CONFIDENCE AND SATISF ATION.

THANK YOU AGAIN.

SINCERELY,

A handwritten signature in cursive script that reads "Dean C. Mahan".

B & B Body and Paint
6518 N. Lamar
Austin, TX 78752

January 26, 2004

To Whom It May Concerns:

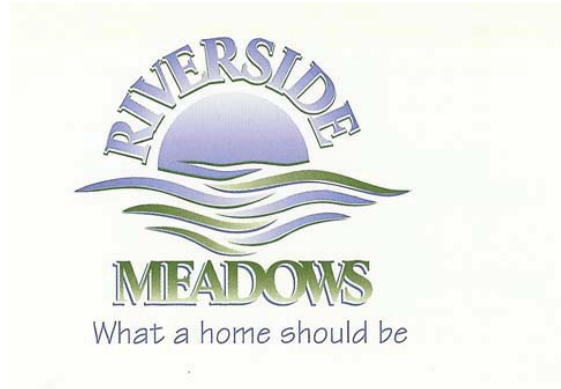

I have been in the auto body repair business for over 15 year and I am always surrounded by high levels of paint fumes. Two weeks ago, Mark Mueller from Air Fantastic stopped by and informed me that the Quadruple Ion technology can quickly remove VOCs such as paint fumes. I was slightly skeptical but he allowed me try out the Plug-in unit in my small manager office (~100 sq ft). Within one hour, all traces of paint fumes and odors were totally eliminated. I am very impressed at the effectiveness of this Quadruple Ion unit. I would recommend this unit to anyone that wants to quickly remove paint fumes.

Sincerely yours,

A handwritten signature in blue ink, appearing to read "Bobby Roberts", is centered on a light green rectangular background.

Bobby Roberts
Manager

CUSTOMER TESTIMONIAL

November 25, 2003

To whom it may concern:

We had an apartment here at Riverside Meadows that had a strong cat urine smell. This smell was so bad that the painters had to wear masks when they painted the unit.

We had the pad under the carpet pulled and the concrete treated with bleach and carpet cleaned and treated but the smell seem to be in the walls. The smell was still so bad that the cleaning crew had to wear masks. At that point I heard about Mark Mueller with Air Fantastic.

Mark Mueller persuade me to put a small QuadIon machine (Ionblaster 1000) in the apartment for 48 hours and it made a great improvement but the smell was still there so he put the large unit (Ionblaster 7000) in for another 48 hours and the smell was gone.

Today, two weeks later, the smell has not returned. This machine is much cheaper than replacing carpet and sometimes even after replacing the carpet the smell still lingers.

Air Fantastic is wonderful and I would highly recommend it to anyone suffering from strong odors that you need to get rid of.

Sincerely yours,

A handwritten signature in black ink that reads "Susan Ashford". The signature is written in a cursive style with a large, looped "S" and a long, sweeping "A".

Susan Ashford
Manager
